

## ENVIRONMENTAL POLICY

Northern Energy & Supply mission is to provide reliable, efficient and sustainable services at sea, every day. Northern Energy & Supply provides the maritime and onshore industry with oil, lubricant- and fuel products. We are proud to be a part of the development of industry and promote the usage of energy efficient and environmentally accepted products in our market.

In our daily business we recommend high quality, environmentally sound and certified products which lead to lesser environmental impact. It is important that our employees are environmentally aware and make decisions with environmental considerations as far as it is cost-effective.

The basis for our environmental focus is to undertake and comply with applicable environmental laws, international conventions and customer environmental policies. We contribute to minimizing emissions by using external environmentally friendly transport companies and by synchronizing shipments.

By purchasing compatible products from companies with environmental certification, we minimize the environmental impact from purchasing.

By setting and monitor environmental goals we assure that we constantly improve our environmental work. We are certified under the ISO 14001 standard.

We guarantee that we work with ESG from a global perspective by linking our sustainability work with UN Sustainability Goals.
